Body

Engineering, procurement and construction (EPC) contractor MT Group said on Monday that it has signed a contract with Danish renewable energy company Ørsted A/S (CPH: ORSTED) to engineer and construct a carbon capture facility in Denmark.

The facility will be part of Ørsted's 20-year agreement with the Danish Energy Agency to capture and store 430,000 tons of CO2 annually.

MT Group will handle the engineering and construction of piping and equipment for the facility, including the cooling and steam systems.

This project aligns with MT Group's strategic focus on renewable energy and strengthens its position in the green energy market.
